

Helixera

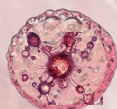

The New Gold Standard
in Cellular Regeneration

Helixera represents the most advanced achievement of modern bio-regenerative science in skin rejuvenation. Its formulation introduces the world's first synergistic foundation combining low-molecular weight PDRN (68 kDa) with high-molecular weight PN (1,521 kDa). This unique pairing is further enhanced with the powerful antioxidant Glutathione, creating a multi-layered regeneration mechanism for the skin.

The developed structure offers not only highly effective results but also maximum safety, high bioavailability and an optimal solubility balance. Every component of Helixera has been meticulously selected to work in perfect harmony and the formulation has been scientifically optimized with precision.

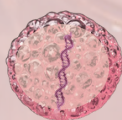

A Revolutionary Triple-Effect Innovation in Bio-Regenerative Science

PDRN - Rapid Cellular Activation

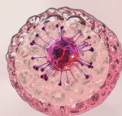

Helixera's precisely engineered low-molecular weight PDRN (68 kDa) acts as the formulation's "rapid-response initiator." It penetrates deeply, activates cellular repair and soothes inflammation.

PN-Long-Lasting Structural Reinforcement

Helixera's high-molecular weight PN (1,521 kDa) serves as the formulation's "structural cornerstone." It forms a hydrating scaffold within the skin, supporting long-term tissue regeneration and ensuring its sustained continuity.

Glutathione – Cellular Defense and Luminosity

As the formulation's "primary antioxidant," Glutathione protects the skin against cellular damage while simultaneously delivering a visibly brighter, more radiant complexion.

The New Gold Standard in Next-Generation Skincare

Helixera represents the pinnacle of scientific innovation in skin renewal and care.

It is a reliable, effective and high-performance solution for aesthetic and dermatological applications.

Discover Helixera and redefine the future of your skin.

The Result of Scientific Precision: Optimal Efficacy

Helixera's specially engineered formula, designed with an ultra-low concentration (0.2%), delivers superior solubility and bioavailability. This allows the product to integrate seamlessly with the skin, absorb rapidly and initiate the regeneration process safely. The formulation's balanced structure enhances both the sensory experience and clinical performance.

While working within the tissues, it provides a light, soothing touch to the skin and leaves a velvety finish after application. Over time, consistent application reveals a noticeable regeneration cycle that progresses from the deeper layers toward the skin's surface.

Clinically Supported Benefits of Helixera

- Rapid activation of the skin's natural repair capacity
- Visible improvement in elasticity and firmness
- Long-lasting hydration balance
- Smoother, brighter and more renewed skin appearance
- Long-term support against signs of aging
- Antioxidant protection against environmental stressors

The New Gold Standard in Skin Regeneration

Helixera is not merely a skincare product; it is one of the most advanced solutions offered by modern aesthetic science. Its innovative formulation initiates a renewal process that supports the skin's structural integrity, enhances luminosity and promotes a long-term healthy appearance.

The product is fully compatible with dermatological treatments, professional skincare protocols and aesthetic procedures. Helixera's refined composition, proven efficacy, and high-performance profile position it as a solution engineered to surpass expectations in skin regeneration.

Helixera is a brand of Vacusera Biostimulants.
